SUBJECT: Waiver for testing during a Code 3 Storm Warning

This waiver permits vibration testing to continue during a Code 3 Storm Warning. The Project assumes the responsibility for a system shutdown if it should occur during a Code 3 condition. After this waiver is signed by a project representative, the test will continue as long as the storm is not directly overhead. If the storm is directly overhead, the test will be stopped by Code 549 and MSEC.

Project Representative Approval
